FOR IMMEDIATE RELEASE

### **Palmer Snyder Introduces C600RG "Rust Guard" chair**

PS Event Furniture has introduced a new steel coating technology for "polyfold" indoor/outdoor folding chairs. This new coating technology fundamentally changes the performance of this chair by completely preventing the formation of rust in all kinds of weather conditions.

The coating technology now applied to PS Event Furniture's Model C600RG chair has been broadly and successfully applied in the automotive industry. Unlike most surface coatings, this new coating adheres to the interior and exterior of the chair's steel tubing frame. This complete coating absolutely prevents the formation of rust, even when chairs are exposed to water for prolonged periods.

*Roger Clark, President of PS Event Furniture comments, "Any steel product for outdoor use is prone to rust and no customer wants to look at this. We were quite pleased to find a technology-based solution that eliminates this problem."*

PS Event Furniture's model C600RG chair features an 18 gauge, 3/4" inch diameter, tubular steel frame with molded polypropylene plastic seat and back. Each chair weighs 7.1 pounds. Palmer Snyder guarantees that C600RG chairs will have no rust problems for a period of three (3) years from date of shipment.

PS Event Furniture has been manufacturing and distributing portable event furniture since 1919. Their product line includes a wide variety of folding tables and chairs, portable dance floor, portable lecterns and beverage service stations...plus the carts to transport the furniture.
